ALUMINIUM FACADES

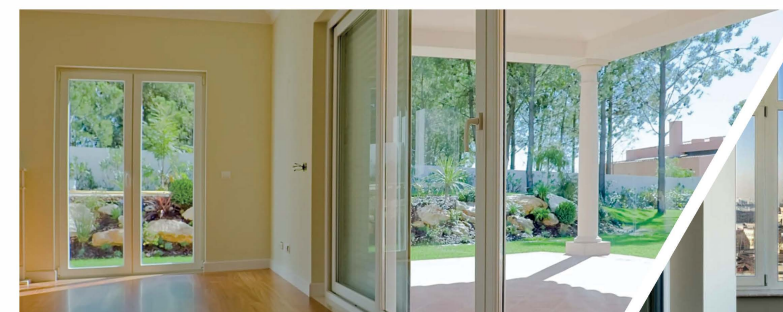

Aluminium windows and doors for energy-efficient and passive houses

Windows and doors made of aluminium profiles are increasingly being used in single-family housing, especially among the most demanding customers. This is due to a number of advantages, such as:

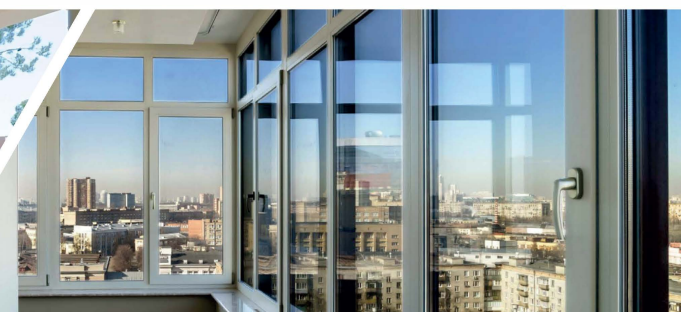

- low weight compared with PVC windows;
- aluminium is a highly mouldable material, which makes it possible to create windows in the most unusual shapes;
- safety and ease of use - aluminium windows are easy to maintain and care for;
- resistance to all weather conditions - aluminium window systems are resistant to temperature changes, humidity, mechanical damage and moreover, they are not deformed by UV rays and heat;
- high insulation - the solutions used provide aluminium windows with optimum thermal insulation, as well as waterproofing and windproofing;
- long service life - unchanged quality and aesthetic parameters, such constructions are also easy to maintain, also characterised by a high degree of resilience;
- environmentally friendly - aluminium joinery can be up to 100% recycled, without any loss of quality;
- modern character - a wide range of colours and versatility of designs make aluminium windows adaptable for all architectural styles and best suited to any environment and look best in modern homes;
- energy efficiency - the high thermal insulation of aluminium windows and doors makes them the perfect fit for passive and energy-efficient houses;
- the extraordinary stability and high strength of aluminium window profiles allow for installation of even very thick and very large glass panes - can reach up to several metres in length and width;
- resistance of aluminium to mould, fungus, moss and corrosion.
